EMPLOYMENT

2018–present

ZAOCHNIK

Frontend Developer 2022–present

Design and collaboration. Work closely with designers and the backend team. Turn Figma mockups into adaptive, pixel-perfect code, discuss interface logic, and keep the implementation aligned with the design at every stage.

Stack. Build the frontend on a modern stack: Vue 3 with the Composition API for flexible reactive logic, TypeScript for strict typing and predictable code, and Pinia for state management. Use Twig when server-side rendering or CMS integration is needed.

Client-server interaction. Implement full client-server interaction: fetch API data with loading and error states, render content dynamically, and submit forms with validation and feedback without page reloads.

Git and Docker. Work in Git with feature branches, take part in code review, resolve conflicts, and keep a clean history. Use Docker to spin up the local environment with backend, database, and related services in one command so the stack is stable and reproducible.

SEO Specialist 2018–2022

KEY COMPETENCIES

Full-cycle product development. Worked on 4 projects in parallel at different maturity stages: redesign and refactoring of legacy products, and building new products from scratch.

SCOPE AND RESULTS

Strategy and analytics. Conducted in-depth market and competitor analysis (Ahrefs, Serpstat). Collected and clustered the semantic core (Key Collector, Wordstat)

to shape site structure and lay the groundwork for strong organic traffic.

Requirements and Product Discovery.

Developed USPs and full project documentation. Aligned technical implementation and the tech stack with the development team, bridging business goals and IT delivery.

Art direction and content. Supervised visual concepts (branding, style) together with designers. Wrote specs for the client-side app, user cabinet, and admin panel, and oversaw content from copywriters through to final layout.

Link building and promotion. Built a backlink growth strategy based on competitor profile analysis. Personally acquired links (marketplaces and direct outreach to webmasters) and managed a link builder to strengthen project rankings.

FREELANCE

2022–present

Client websites

Nuxt fullstack

- Build websites end to end: competitor analysis, keyword research, site structure, and basic SEO.
- Fullstack development with Nuxt: own the project from brief to launch, including the client and server sides.
